Flight dynamics is the science of air vehicle orientation and control in three dimensions. The three critical flight dynamics parameters are the angles of rotation in three dimensions about the vehicle's center of gravity (cg), known as pitch, roll and yaw.. Control systems adjust the orientation of a vehicle about its cg. A control system includes control surfaces which, when deflected ...

Mathematical review of the involute curve and its significance to mechanical gear systems. An involute, specifically a circle involute, is a geometric curve that can be described by the trace of unwrapping a taut string which is tangent to a circle, known as the base circle. The circle involute has attributes that are critically important to the application of mechanical gears.

Davenport possible axes for steps 1 and 3 given Z as the step 2. The general problem of decomposing a rotation into three composed movements about intrinsic axes was studied by P. Davenport, under the name "generalized Euler angles", but later these angles were named "Davenport angles" by M. Shuster and L. Markley.. The general problem consists of obtaining the matrix decomposition of a ...
