we increase the voltage, the current goes up, and similarly, if we decrease the voltage, the current goes down. This means that if the voltage is high the current is high, and if the voltage is low the current is low.

### **Relationship between Voltage Current and Resistance**

Kirchoff's current law tells us that the same amount of current entering the junction after R1 must also leave the junction. We also know that the voltage drop across each path of the split is the same. Consider the following circuit to help visualize things: Using Ohm's law to expand the voltages, we get:
