Thus, immunity and immunopathology represent two faces of the same coin. Of the numerous introductory texts available in the field, Dr. Sell's provides the best focus on this duality. He begins with a section devoted to the basic aspects of immunology, which is well written and organized along fairly standard lines.

Immunity or immunopathology following viral infection. Following entry into host cells, viruses (cytopathic or non-cytopathic) replicate at the site of infection. Cytopathic viruses kill infected cells, causing the release of cellular contents, including proteases and lysosomal enzymes, which digest the extracellular matrix and create an inflammatory milieu.

Immunity and immunopathology to viruses: what decides the ...

immunity is the first immunological mechanism for fighting against an intruding pathogen. It is a rapid immune response, initiated within minutes or hours after aggression, that has no immunologic memory. Adaptive immunity, on the other hand, is

The microbiota consists of a dynamic multispecies community of bacteria, fungi, archaea, and protozoans, bringing to the host organism a dowry of cells and genes more numerous than its own. Among the different non-sterile cavities, the human gut harbors the most complex microbiota, with a strong impact on host homeostasis and immunostasis, being thus essential for maintaining the health condition.
